

Leapmile - FM Global Compliance Experience

Leapmile acknowledges the importance of adhering to FM Global guidelines, which emphasize property loss prevention and risk mitigation standards.

At present, we [do/do not] have direct past experience with formal compliance or certification under FM Global guidelines.

However, our infrastructure and operational safeguards are designed with industry-recognized risk management principles, which align closely with FM Global's focus areas such as:

- Fire prevention and suppression
- Electrical safety
- Equipment maintenance
- Data center resilience
- Business continuity and recovery planning

If required, we are open to engaging in a compliance assessment or alignment initiative with FM Global standards as part of ongoing client or project requirements.
