The following features are designed for the secure Nano Warehouse system:

1. The Front & Rear panel door is interlocked with the emergency stop system to ensure that any unintentional opening will immediately trigger an emergency stop, enhancing operator safety.

2. An isolator switch has been provided on the system panel, allowing for safe disconnection and maintenance as needed. Additionally, an isolator can also be provided outside the system in the power panel by the site team.

3. The emergency mode (ON/OFF) status is clearly indicated through both an indication lamp accompanied by appropriate safety signage.
